Care For Work Environments®

State A-SALT™

PRODUCT OVERVIEW :

PHOSPHATE-FREE FORMULA

A-Salt is composed of urea hydrochloride, an organic salt that acts like an acid, making this product surface-friendly and non-damaging to porcelain and drain lines. A-Salt is phosphate-free and contains no VOCs.

POWERFUL DRAIN CLEANING

Drain lines are easily cleared of uric salt buildup, calcium deposits, lime buildup and even rust. State A-Salt™ works faster and more effectively than phosphoric acid products while helping reduce odors associated with buildup.

EASY TO USE

Dose urinals during periods of limited use to allow State A-Salt™ to work thoroughly. It produces no harsh odors or fumes during use.

DIRECTIONS FOR USE :

For preventive maintenance of urinal drain lines, treat each urinal with 8 ounces of State A-Salt Urinal Drain Cleaner and allow it to sit overnight.

If using in urinals equipped with an automatic flushing system, turn off the water before adding product to the drain line.

Problematic drain lines may require more frequent treatment.

For waterless urinals, allow 8 ounces to sit overnight, then thoroughly flush the product through the drain line. Remove the cartridge before application.

NOTE Use caution on galvanized steel, chrome, and aluminum surfaces.

TECHNICAL DATA :

APPEARANCE: red/orange color

ODOR: wintergreen

pH: less than 1

Please review label and SDS for all product directions, precautions, and first aid information.
